Key words and concepts for funders in England

Hi,

Not really an article more some quick thoughts.

In England and perhaps the rest of the UK, *resilience* is a buzz word at the minute in public health/health promotion.

Another one that might become popular is *flourishing*.

Generally in terms of *emotional wellbeing* some organisations are keen on *5 a day for mental wellbeing*. For more information see <http://www.neweconomics.org/projects/five-ways-well-being> .

Hope this is helpful.
